

Anas Nadeem

Uxbridge, London, UK | +44 7438 412239 | anass.nadeem42@gmail.com | [LinkedIn](#) | [GitHub](#)

Computer Science undergraduate specializing in Artificial Intelligence, Machine Learning, and Python. Proven track record of developing complex technical solutions, from engineering autonomous AI security agents to award-winning robotic assemblies. Highly motivated by foundational research, rapid prototyping, and utilizing frontier models to solve real-world, large-scale challenges.

Education

Brunel University London

Sep 2025 - Jun 2028

BSc (Hons), Computer Science (AI) with Work Placement

Introductory Programming, Programming Applications, Data and Information, Information Systems and Organisations

Beaconhouse School System

Aug 2020 - Aug 2025

A-Levels & O-Levels | *Mathematics, Computer Science, Physics*

Area of Expertise

- Python
- Java
- Pandas & NumPy
- Imitation Learning / VLA
- Computer Vision
- Natural Language Processing (NLP)
- LLMs / Autonomous Agents
- SQL
- Git/GitHub

Research & Technical Projects

BOXBOX: LLM Strategy Benchmark | *Lead Researcher & Developer*

- Engineered a novel, contamination-resistant benchmark to rigorously evaluate the reasoning capabilities of frontier Large Language Models (LLMs) in high-stakes, real-time environments.
- Designed the evaluation framework around complex Formula 1 pit-stop strategy decisions, testing models on dynamic data parsing, probabilistic reasoning, and strategic foresight.
- Authored a comprehensive research manuscript detailing the benchmarking methodology, dataset curation, and comparative analysis of model performance.

Oxford Physical AI Hackathon | *1st Place Winner (Imitation Learning/VLA Track)*

May 2026

- Built a real-time, webcam-based teleoperation system utilizing computer vision to precisely mirror human hand movements onto a robotic assembly within a 30-hour constraint.
- Applied Imitation Learning methodologies to successfully calibrate and program a complex 8-servo motor robotic system from scratch.

Encode Agentic AI Hackathon | *AI Agent Developer (AssertionOS)*

Dec 2025

- Engineered a fully autonomous AI security agent leveraging Gemini to conduct complex real-time reasoning and risk assessment workflows.
- Designed an end-to-end system integrating LLM-driven text-to-speech and autonomous processing to simulate a continuous, proactive security analyst.

Professional Experience

Brunel University London | *Student Ambassador*

June 2026 - Present

- Represent Brunel University at large-scale recruitment events, effectively translating complex academic programs into clear, engaging messaging for prospective students.
- Facilitate comprehensive campus tours and interactive Q&A sessions, demonstrating strong public speaking and the interpersonal skills essential for collaborative environments.

Electech | *Student Leader*

Jan 2026 - March 2026

- Coordinated and delivered structured STEM and robotics curricula for 15+ participants, managing scheduling and materials to maximize operational efficiency.
- Facilitated hands-on learning with tools like Tinkercad, successfully bridging the gap between theoretical computing concepts and accessible practical applications.

TallyMarks Consulting | *PHP Intern*

Jul 2024 - Aug 2024

- Designed, developed, and tested dynamic web applications using PHP, HTML, and CSS, ensuring robust functionality and an optimal user experience.
- Authored and optimized complex SQL queries for relational databases, significantly improving data retrieval speeds and overall storage efficiency.
